- 4 DIMM Slots
- **1 DIMM**: Supports one module inserted in any slot as Single-channel memory configuration
 - **2 DIMM**: Supports one pair of modules inserted into either the gray slots or the black slots as one pair of Dual-channel memory configuration
 - **4 DIMM**: Supports 4 modules inserted into both the gray and black slots as two pairs of Dual-channel memory configuration
- Due to Intel® H97 chipset limitation, DDR3 1600 MHz and higher memory modules on XMP mode will run at the maximum transfer rate of DDR3 1600 Mhz.

- When installing total memory of 4GB capacity or more, Windows 32-bit operation system may only recognize less than 3GB. Hence, a total installed memory of less than 3GB is recommended.

- It is recommended to install the memory modules from the gray slots for better overclocking capability.

- The default DIMM frequency depends on its Serial Presence Detect (SPD), which is the standard way of accessing information from a memory module. Under the default state, some memory modules for overclocking may
