Safety information

Electrical safety

• To prevent electrical shock hazard, disconnect the power cable from the electrical outlet before relocating the system.
• When adding or removing devices to or from the system, ensure that the power cables for the devices are unplugged before the signal cables are connected. If possible, disconnect all power cables from the existing system before you add a device.
• Before connecting or removing signal cables from the motherboard, ensure that all power cables are unplugged.
• Seek professional assistance before using an adapter or extension cord. These devices could interrupt the grounding circuit.
• Ensure that your power supply is set to the correct voltage in your area. If you are not sure about the voltage of the electrical outlet you are using, contact your local power company.
• If the power supply is broken, do not try to fix it by yourself. Contact a qualified service technician or your retailer.

Operation safety

• Before installing the motherboard and adding components, carefully read all the manuals that came with the package.
• Before using the product, ensure all cables are correctly connected and the power cables are not damaged. If you detect any damage, contact your dealer immediately.
• To avoid short circuits, keep paper clips, screws, and staples away from connectors, slots, sockets and circuitry.
• Avoid dust, humidity, and temperature extremes. Do not place the product in any area where it may be exposed to moisture.
• Place the product on a stable surface.
• If you encounter technical problems with the product, contact a qualified service technician or your retailer.

Product introduction

Motherboard overview

- Unplug the power cord from the wall socket before touching any component.
- Before handling components, use a grounded wrist strap or touch a safely grounded object or a metal object, such as the power supply case, to avoid damaging them due to static electricity.
- Before you install or remove any component, ensure that the ATX power supply is switched off or the power cord is detached from the power supply. Failure to do so may cause severe damage to the motherboard, peripherals, or components.
- Unplug the power cord before installing or removing the motherboard. Failure to do so can cause you physical injury and damage to motherboard components.

1 ATX power connectors (24-pin EATXPWR_A/B/C, 8-pin EATX12V, 4-pin AUXPWR_A1/A2/A3)
Correctly orient the ATX power supply plugs into these connectors and push down firmly until the connectors completely fit.

- In order to fully support 19 graphic cards mining, we recommend that you use 3 power supply units (PSU) that are designed for mining with sufficient 12V power plugs and provide a minimum power of 3750W in total (2*1250W + 1*1350W are recommended).
- AUXPWR_A1/A2/A3 must be connected to the same power supply plugged in the 24-pin EATXPWR_A connector.

- We recommend that you use a PSU with higher power output when configuring a system with more power-consuming devices or when you intend to install additional devices. The system may become unstable or may not boot up if the power is inadequate.
- If you are uncertain about the minimum power supply requirement for your system, refer to the Recommended Power Supply Wattage Calculator at http://support.asus.com/PowerSupplyCalculator/PSCalculator.aspx?SLanguage=en-us for details.

2 Intel® LGA1151 CPU socket
Install Intel® LGA1151 CPU into this surface mount LGA1151 socket, which is designed for 7th/6th Generation Intel® Core™ i7 / i5 / i3, Pentium®, and Celeron® processors.

For more details, refer to Central Processing Unit (CPU).

3 CPU and chassis fan connectors (4-pin CPU_FAN, 4-pin CHA_FAN)
Connect the fan cables to the fan connectors on the motherboard, ensuring that the black wire of each cable matches the ground pin of the connector.

Do not forget to connect the fan cables to the fan connectors. Insufficient air flow inside the system may damage the motherboard components. These are not jumpers! Do not place jumper caps on the fan connectors! The CPU_FAN connector supports a CPU fan of maximum 1A (12 W) fan power.

4 DDR4 DIMM slots
Install 2 GB, 4 GB, 8 GB, and 16 GB unbuffered non-ECC DDR4 DIMMs into these DIMM sockets.

- To make your build more stable, when using 8 or more cards for mining, we recommend that you install 4GB memory modules and change the size of the virtual memory paging file to 30GB.
- For more details, refer to System memory.
USB 3.1 Gen 1 connector (20-1 pin U31G1_12)
Connect a USB 3.1 Gen 1 module to this connector for additional USB 3.1 Gen 1 front or rear panel ports. This connector complies with USB 3.1 Gen 1 specifications and provide faster data transfer speeds of up to 5 Gbps, faster charging time for USB-chargeable devices, optimized power efficiency, and backward compatibility with USB 2.0.

Clear RTC RAM (2-pin CLRTC)
This header allows you to clear the CMOS RTC RAM data of the system setup information such as date, time, and system passwords.

To erase the RTC RAM:
1. Turn OFF the computer and unplug the power cord.
2. Use a metal object such as a screwdriver to short the two pins.
3. Plug the power cord and turn ON the computer.
4. Hold down the <Del> key during the boot process and enter BIOS setup to re-enter data.

If the steps above do not help, remove the onboard battery and short the two pins again to clear the CMOS RTC RAM data. After clearing the CMOS, reinstall the battery.

System panel connector (20-5 pin F_PANEL)
This connector supports several chassis-mounted functions.

Intel® B250 Serial ATA 6.0Gb/s connectors (7-pin SATA6G_1~4)

USB 2.0 connector (10-1 pin USB910)
Connect a USB module cable to this connector, then install the module to a slot opening at the back of the system chassis. These USB connectors comply with USB 2.0 specifications and supports up to 480Mbps connection speed.

Serial port connector (10-1 pin COM)
Connect the serial port module cable to this connector, then install the module to a slot opening at the back of the system chassis.

Digital audio connector (4-1 pin SPDIF_OUT)
Connect the S/PDIF Out module cable to this connector, then install the module to a slot opening at the back of the system chassis.
Front panel audio connector (10-1 pin AAFP)
This connector is for a chassis-mounted front panel audio I/O module that supports either HD Audio or legacy AC'97 audio standard. Connect one end of the front panel audio I/O module cable to this connector.

- We recommend that you connect a high-definition front panel audio module to this connector to avail of the motherboard's high-definition audio capability.
- If you want to connect a high-definition front panel audio module to this connector, set the Front Panel Type item in the BIOS setup to [HD Audio]. If you want to connect an AC'97 front panel audio module to this connector, set the item to [AC97]. By default, this connector is set to [HD Audio].

- We strongly recommend that you connect USB 3.1 Gen 1 devices to USB 3.1 Gen 1 ports for faster and better performance from your USB 3.1 Gen 1 devices.
- Due to the design of the Intel® 200 series chipset, all USB devices connected to the USB 2.0 and USB 3.1 Gen 1 ports are controlled by the xHCI controller. Some legacy USB devices must update their firmware for better compatibility.

9. **PS/2 Keyboard port.** This port connects to a PS/2 keyboard.
Central Processing Unit (CPU)

This motherboard comes with a surface mount LGA1151 socket designed for the 7th/6th Generation Intel® Core™ i7 / Core™ i5 / Core™ i3, Pentium® and Celeron® processors.

Unplug all power cables before installing the CPU.

- Ensure that you install the correct CPU designed for the LGA1151 socket only. DO NOT install a CPU designed for LGA1150, LGA1155 and LGA1156 sockets on the LGA1151 socket.

- Upon purchase of the motherboard, ensure that the PnP cap is on the socket and the socket contacts are not bent. Contact your retailer immediately if the PnP cap is missing, or if you see any damage to the PnP cap/socket contacts/motherboard components.

- Keep the cap after installing the motherboard. ASUS will process Return Merchandise Authorization (RMA) requests only if the motherboard comes with the cap on the LGA1151 socket.

- The product warranty does not cover damage to the socket contacts resulting from incorrect CPU installation/removal, or misplacement/loss/incorrect removal of the PnP cap.

Installing the CPU

1. Apply the Thermal Interface Material to the CPU heatsink and CPU before you install the heatsink and fan if necessary.
System memory

Overview

This motherboard comes with two Double Data Rate 4 (DDR4) Dual Inline Memory Module (DIMM) sockets. A DDR4 module is notched differently from a DDR, DDR2, or DDR3 module. DO NOT install a DDR, DDR2, or DDR3 memory module to the DDR4 slot.

- You may install varying memory sizes in Channel A and Channel B. The system maps the total size of the lower-sized channel for the dual-channel configuration. Any excess memory from the higher-sized channel is then mapped for single-channel operation.
- Always install DIMMs with the same CAS latency. For optimal compatibility, we recommend that you install memory modules of the same version or date code (D/C) from the same vendor. Check with the retailer to get the correct memory modules.
- According to Intel® CPU spec, DIMM voltage below 1.4V is recommended to protect the CPU.
- Due to Intel® chipset limitation, DDR4 2400MHz memory frequency is only supported by 7th Generation Intel® processors. Higher memory modules will run at the maximum transfer rate of DDR4 2400MHz.
- Due to Intel® chipset limitation, DDR4 2133MHz and higher memory modules on 6th Generation Intel® processors will run at the maximum transfer rate of DDR4 2133MHz.
- Memory modules with memory frequency higher than 2133/2400 MHz and its corresponding timing or the loaded X.M.P. Profile is not the JEDEC memory standard. The stability and compatibility of these memory modules depend on the CPU’s capabilities and other installed devices.

- To make your build more stable, when using 8 or more cards for mining, we recommend that you install 4GB memory modules and change the size of the virtual memory paging file to 30GB.
- The default memory operation frequency is dependent on its Serial Presence Detect (SPD), which is the standard way of accessing information from a memory module. Under the default state, some memory modules for overclocking may operate at a lower frequency than the vendor-marked value.
- For system stability, use a more efficient memory cooling system to support a full memory load (2 DIMMs).
- Refer to [www.asus.com](http://www.asus.com) for the latest Memory QVL (Qualified Vendors List)

2.

Expansion slots

This motherboard comes with one PCIe x16 and eighteen (18) PCIe x1 expansion card slots that support graphics cards, network cards, and other cards that comply with PCIe specifications.

The added expansion slots and power connectors are uniquely designed to support up to 19 mining graphics cards for professional cryptocurrency mining. The following sections describe the location of the expansion slots and power connectors, and how to install the mining cards and connect the power supply unit.

The expansion slots and power connectors are divided into three groups, located in three areas and labeled with A, B and C, as shown in the illustrations below.
Installing mining cards

Unplug the power cord before adding or removing expansion cards. Failure to do so may cause you physical injury and damage motherboard components.

To support more than 8 cards for mining, you need to install AMD Radeon Software Crimson ReLive Edition 17.10.2 driver. Please go to AMD website to download the driver and view more information.
To install mining cards:

- **Seven (7) or less mining cards**

1. Install your mining cards into the PCIe x16 slot and the PCIe x1 slots labeled Axx in sequential order A01 ~ A06.
2. Connect your power supply unit (PSU) to the 24-pin EATX power connector labeled *EATXPWR_A*.

---

AUXPWR_A1/A2/A3 must be connected to the same power supply plugged in the 24-pin EATXPWR_A connector.
• **8 ~ 13 mining cards**

To make your build more stable, when using 8 or more cards for mining, we recommend that you install 4GB memory modules and change the size of the virtual memory paging file to 30GB.

1. Install your mining cards into the PCIe x16 slot and the PCIe x1 slots labeled *Axx* and *Bxx* in sequential order A01 ~ B12.

2. Connect your power supply unit (PSU) to the 24-pin EATX power connectors labeled *EATXPWR_A* and *EATXPWR_B*.

To make the power consumption in balance, connect the 6-pin/8-pin power connectors of your mining cards in area A to the power supply unit (PSU) plugged in EATXPWR_A, and mining cards in area B to the power supply unit (PSU) plugged in EATXPWR_B.
• **14 ~ 19 mining cards**

1. Install your mining cards into the PCIe x16 slot and the PCIe x1 slots labeled *Axx*, *Bxx* and *Cxx* in sequential order A01 ~ C18.

2. Connect your power supply unit (PSU) to 24-pin EATX power connectors labeled *EATXPWR_A*, *EATXPWR_B* and *EATXPWR_C*.

- To make the power consumption in balance, connect the 6-pin/8-pin power connectors of your mining cards in area A to the power supply unit (PSU) plugged in *EATXPWR_A*, mining cards in area B to the power supply unit (PSU) plugged in *EATXPWR_B*, and mining cards in area C to the power supply unit (PSU) plugged in *EATXPWR_C*.

- To support more than 16 graphics cards, you need to install AMD Radeon Software Crimson ReLive Edition 17.10.2 driver. Please go to AMD website to download the driver and view more information.

- To ensure system stability, when you want to use the full complement of 19 mining cards to get the fastest mining speed, we recommend that you use a mix of 11 AMD mining cards and 8 NVIDIA P106 mining cards. Otherwise, the system may be unstable.
