

### Step 1:

Before installing the beta version of GPU Tweak II, it's important to remove existing versions first. Start by closing GPUtweakII.exe and Monitor.exe. To do so, please check and close the related files in the following locations (please check all three locations!):

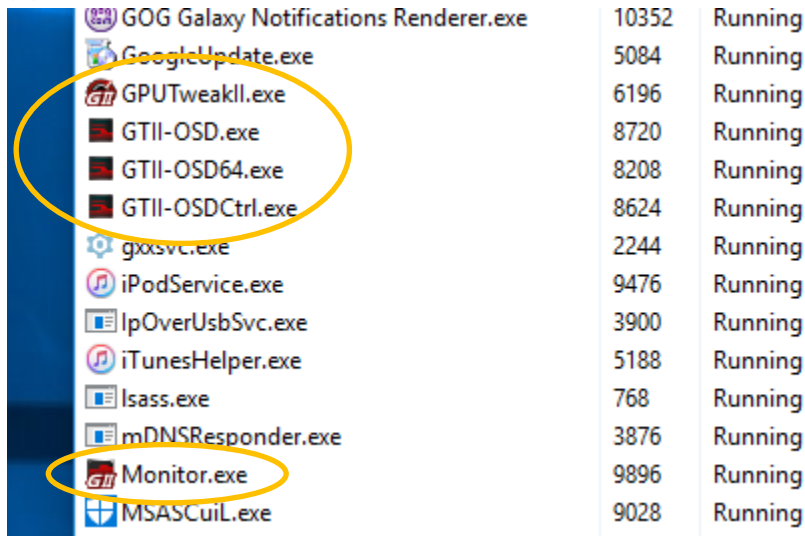

(1) Close the Desktop utility

(2) Exit (close) GPU Tweak within the Windows Quick Launch toolbar

(3) Click 'End Task' for all GPU Tweak related files within Task Manager

GOG Galaxy Notifications Renderer.exe	10352	Running
GoogleUpdate.exe	5084	Running
GPOTweakII.exe	6196	Running
GTII-OSD.exe	8720	Running
GTII-OSD64.exe	8208	Running
GTII-OSDCtrl.exe	8624	Running
gpxsvc.exe	2244	Running
iPodService.exe	9476	Running
IpOverUsbSvc.exe	3900	Running
iTunesHelper.exe	5188	Running
lsass.exe	768	Running
mDNSResponder.exe	3876	Running
Monitor.exe	9896	Running
MSASCuiL.exe	9028	Running

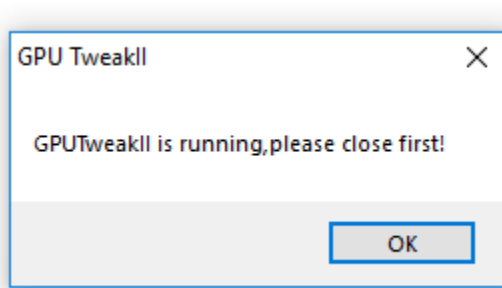

**Step 2:**

Run "ASUS GPOTweakII RemoveTool.exe".

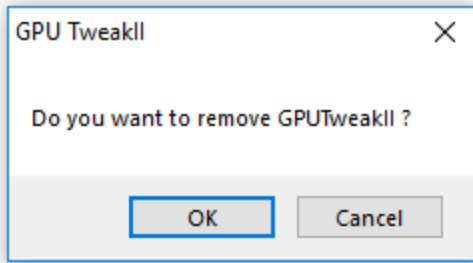

**Step 3:**

If the following message appears, go back to Step 1 and check that GPOTweakII is not running. Otherwise, proceed to Step 4.

**Step 4:**

Click OK to remove GPOTweakII OSD.

**Step 5:**

Click OK, and then restart your computer.
