1 Getting to know your wireless router

1.1 Welcome!

Thank you for purchasing an ASUS DSL-AC87VG Wi-Fi Router! ASUS DSL-AC87VG features up to 2334 Mbps of concurrent wireless performance on its dual-band rate, providing you with up to 4K ultra-high definition video playback, ultra-fast large file sharing, and low latency online gaming. It features DECT support and built-in telephone softswitch (PBX) that allows you to connect to compatible devices such as common analog phones, DECT phones, FAX machines, and IP phones.

1.2 Package contents

- VDSL/ADSL DSL-AC87VG
- Network cable (RJ-45)
- Power adapter
- DSL cable (1x TAE-F plug / 1x RJ-45 8p2c plug)
- Warranty card
- Quick Start Guide

NOTES:

- If any of the items is damaged or missing, contact ASUS for technical inquiries and support. Refer to the ASUS Support Hotline list at the back of this user manual.
- Keep the original packaging material in case you would need future warranty services such as repair or replacement.
1.3 Your wireless router

1.4 Positioning your router

For the best wireless signal transmission between the wireless router and the network devices connected to it, ensure that you:

• Place the wireless router at the center of your network for maximum wireless coverage.

• Keep the device away from metal obstructions and away from direct sunlight.

• Keep the device away from 802.11g or 20MHz only Wi-Fi devices, 2.4GHz computer peripherals, Bluetooth devices, cordless phones, transformers, heavy-duty motors, fluorescent lights, microwave ovens, refrigerators, and other industrial equipment to prevent signal interference or loss.

• To ensure the best wireless signal, orient the four detachable antennas as shown in the drawing below.

• Always update to the latest firmware. Visit the ASUS website at http://www.asus.com to get the latest firmware updates.
1.5 Setup Requirements

- Latest version of a web browser such as Internet Explorer, Firefox, Google Chrome
- For connecting computers:
  - Ethernet RJ-45 (LAN) port (10Base-T/100Base-TX/1000BaseTX)
- For landline telephony:
  - Analog telephone line compliant with local regulations
- Internet connection via:
  - DSL line (with or without splitter)
  - Cable modem
  - USB modem for mobile Internet access (UMTS/HSPA)
- Mobile devices, such as tablets or smartphones, that are compliant with IEEE 802.11a/b/g/n/ac standards.

**NOTES:**

- If your computer does not have built-in wireless capabilities, you may install an IEEE 802.11a/b/g/n/ac WLAN adapter to your computer to connect to the network.
- The Ethernet RJ-45 cables that will be used to connect the network devices should not exceed 100 meters.
1.6 DSL-AC87VG Setup

To set up your DSL-AC87VG via wired connection:

1. Insert your DSL-AC87VG’s power adapter to the DC-IN port and plug it to a power outlet.

2. Connect one end of the bundled DSL cable (1x TAE-F plug / 1x RJ-45 8p2c plug) to the DSL port of your DSL-AC87VG, and connect the other end to the DSL or VDSL line.

3. Using RJ-11 cables, connect your phones to FON1/FON2 ports on your DSL-AC87VG. When available, you may also connect your phones to the TAE ports.

**NOTE:** The TAE ports are available on the ASUS DSL-AC87VG in some areas/regions.

4. Using a network cable, connect your computer to your DSL-AC87VG’s LAN port
2 Getting started

2.1 Logging into the Web GUI

Your ASUS DSL-AC87VG comes with an intuitive web graphical user interface (GUI) that allows you to easily configure its various features through a web browser such as Internet Explorer, Firefox, Safari, or Google Chrome.

**NOTE:** The features may vary with different firmware versions.

**To log into the web GUI:**

2. On the login page, key in the default user name (admin) and password (admin).
3. You can now use the Web GUI to configure various settings of your ASUS DSL-AC87VG.

**NOTE:** If you are logging into the Web GUI for the first time, you will be directed to the Quick Internet Setup (QIS) page automatically.
2.2 Quick Internet Setup (QIS) with Auto-detection

The Quick Internet Setup (QIS) function guides you in quickly setting up your Internet connection.

**NOTE:** When setting the Internet connection for the first time, press the Reset button on your wireless router to reset it to its factory default settings.

**To use QIS with auto-detection:**

1. Log into the Web GUI. The QIS page launches automatically.

**NOTES:**

- By default, the login username and password for your wireless router's Web GUI is **admin**. For details on changing your wireless router's login username and password, refer to section 4.6.2 System.
- The wireless router's login username and password is different from the 2.4GHz/5GHz network name (SSID) and security key. The wireless router's login username and password allows you to log into your wireless router's Web GUI to configure your wireless router's settings. The 2.4GHz/5GHz network name (SSID) and security key allows Wi-Fi devices to log in and connect to your 2.4GHz/5GHz network.

2. The wireless router automatically detects if your ISP connection type is **Dynamic IP** and **PPPoE**. Key in the necessary information for your ISP connection type.

**IMPORTANT!** Obtain the necessary information from your ISP about the Internet connection type.
for Automatic IP (DHCP)

for PPPoE
NOTES:

• The auto-detection of your ISP connection type takes place when you configure the wireless router for the first time or when your wireless router is reset to its default settings.

• If QIS failed to detect your Internet connection type, click **Skip to manual setting** and manually configure your connection settings.

3. Assign the wireless network name (SSID) and security key for your 2.4GHz and 5 GHz wireless connection. Click **Apply** when done.

4. Your Internet and wireless settings are displayed. Click **Next** to continue.

5. Read the wireless network connection tutorial. When done, click **Finish**.
2.3 Connecting to your wireless network

After setting up your wireless router via QIS, you can connect your computer or other smart devices to your wireless network.

To connect to your network:

1. On your computer, click the network icon in the notification area to display the available wireless networks.
2. Select the wireless network that you want to connect to, then click Connect.
3. You may need to key in the network security key for a secured wireless network, then click OK.
4. Wait while your computer establishes connection to the wireless network successfully. The connection status is displayed and the network icon displays the connected status.

NOTES:

• Refer to the next chapters for more details on configuring your wireless network's settings.
• Refer to your device's user manual for more details on connecting it to your wireless network.
3 Configuring the General settings

3.1 Using the Network Map

Network Map allows you to configure your network’s security settings, manage your network clients, and monitor your USB device.

3.1.1 Setting up the wireless security settings

To protect your wireless network from unauthorized access, you need to configure its security settings.

To set up the wireless security settings:
1. From the navigation panel, go to General > Network Map.
2. On the Network Map screen and under **System status**, you can configure the wireless security settings such as SSID, security level, and encryption settings.

**NOTE**: You can set up different wireless security settings for 2.4GHz and 5GHz bands.

3. On the **Wireless name (SSID)** field, key in a unique name for your wireless network.

4. From the **Authentication Method** dropdown list, select the authentication method for your wireless network.

   If you select WPA-Personal or WPA-2 Personal as the authentication method, key in the WPA-PSK key or security passkey.

**IMPORTANT!** The IEEE 802.11n/ac standard prohibits using High Throughput with WEP or WPA-TKIP as the unicast cipher. If you use these encryption methods, your data rate will drop to IEEE 802.11g 54Mbps connection.

5. Click **Apply** when done.
3.1.2 Managing your network clients

To manage your network clients:

1. From the navigation panel, go to **General > Network Map** tab.

2. On the **Network Map** screen, select the **Clients** icon to display your network client’s information.

3. Click View List below the **Clients** icon to display all the clients.

4. To block a client’s access to your network, select the client and click the open lock icon.
3.1.3 Monitoring your USB device

The ASUS DSL-AC87VG provides two USB ports for connecting USB devices or USB printer to allow you to share files and printer with clients in your network.

NOTES:

- To use this feature, you need to plug a USB storage device, such as a USB hard disk or USB flash drive, to the USB 3.0/2.0 ports on the rear panel of your wireless router. Ensure that the USB storage device is formatted and partitioned properly. Refer to the Plug-n-Share Disk Support List at http://event.asus.com/networks/disksupport.
- The USB ports support two USB drives or one printer and one USB drive at the same time.

IMPORTANT! You first need to create a share account and its permission/access rights to allow other network clients to access the USB device via an FTP site/third-party FTP client utility, Servers Center, Samba, or AiCloud. For more details, refer to the section 3.5 Using the USB Application and 3.6 Using AiCloud in this user manual.

To monitor your USB device:

1. From the navigation panel, go to General > Network Map.
2. On the Network Map screen, select the USB Disk Status icon to display your USB device’s information.
3. On the AiDisk Wizard field, click GO to set up an FTP server for Internet file sharing.

NOTES:

- For more details, refer to the section 3.5.2 Using Media Services and Servers in this user manual.
- The wireless router works with most USB HDDs/Flash disks (up to 4TB size) and supports read-write access for FAT16, FAT32, NTFS, and HFS+.
Safely removing the USB disk

**IMPORTANT:** Incorrect removal of the USB disk may cause data corruption.

**To safely remove the USB disk:**
1. From the navigation panel, go to **General > Network Map**.
2. In the upper right corner, click **Eject USB disk**. When the USB disk is ejected successfully, the USB status shows Unmounted.

### 3.2 Creating a Guest Network

The Guest Network provides temporary visitors with Internet connectivity via access to separate SSIDs or networks without providing access to your private network.

**NOTE:** DSL-AC87VG supports up to six SSIDs (three 2.4GHz and three 5GHz).

**To create a guest network:**
1. From the navigation panel, go to **General > Guest Network**.
2. On the Guest Network screen, select 2.4GHz or 5GHz frequency band for the guest network that you want to create.
3. Click **Enable**.
4. Assign a wireless name for your temporary network on the **Network Name (SSID)** field.
5. Select the **Authentication Method**.
6. When done, click **Apply**.
3.3 Setting up Parental Control

Parental Control allows you to control the Internet access time. Users can set the time limit for a client’s network usage.

To use the parental control function:

1. From the navigation panel, go to General > Parental Controls.
2. Click ON to enable Parental Control.
3. Select the client whose network usage you want to control. You may also key in the client’s MAC address in the Client MAC Address column.

**NOTE:** Ensure that the client name does not contain special characters or spaces as this may cause the router to function abnormally.

4. Click or to add or delete the client’s profile.
5. In the Time Management column, click to select your preferred time slots for allowed access time. Drag and hold to create longer time slots.
6. Click Apply to save the settings.
3.4 Using the Traffic Manager

3.4.1 Managing QoS (Quality of Service) Bandwidth

Quality of Service (QoS) allows you to set the bandwidth priority and manage network traffic.

To set up bandwidth priority:

1. From the navigation panel, go to **General > Traffic Manager**.
2. Click **ON** to enable QoS. Fill in the upload and download bandwidth fields.

**NOTE:** Get the bandwidth information from your ISP.

3. Click **Save**.

**NOTE:** The User Specify Rule List is for advanced settings. If you want to prioritize specific network applications and network services, select **User-defined QoS rules** or **User-defined Priority** from the drop-down list on the upper-right corner.
3.5 Using the USB Application

The USB Applications function provides AiDisk, Servers Center, Network Printer Server and Download Master submenus.

IMPORTANT! To use the server functions, you need to insert a USB storage device, such as a USB hard disk or USB flash drive, in the USB 2.0 port on the rear panel of your wireless router. Ensure that the USB storage device is formatted and partitioned properly. Refer to the ASUS website at http://event.asus.com/2009/networks/disksupport/ for the file system support table.

3.5.1 Using AiDisk

AiDisk allows you to share files stored on a connected USB device through the Internet. AiDisk also assists you with setting up ASUS DDNS and an FTP server.

To use AiDisk:
1. From the navigation panel, go to General > USB Application, then click the AiDisk icon.
2. From the Welcome to AiDisk wizard screen, click Go.
3. Select the access rights that you want to assign to the clients accessing your shared data.

4. Tick **I will use the service**, assign a unique name for your domain name, then click **Next**.

5. Click **Finish** to complete the setting.

6. To access the FTP site that you created, launch a web browser or a third-party FTP client utility and key in the ftp link (**ftp://<domain name>.asuscomm.com**) you have previously created.
3.5.2 Using Media Services and Servers

Media Services and Servers allows you to share the media files from the USB disk via a Media Server directory, Samba share service, or FTP share service. You can also configure other settings for the USB disk in the Servers Center.

Using Media Server

Your wireless router allows DLNA-supported devices to access multimedia files from the USB disk connected to your wireless router.

**NOTE**: Before using the DLNA Media Server function, connect your device to the DSL-AC87VG’s network.

To launch the Media Server setting page, go to General > USB Application > Media Services and Servers > Media Server tab. Refer to the following for the descriptions of the fields:

- **Enable UPnP Media Server**: Select ON/OFF to enable/disable the UPnP Media Server.
- **Media Server Path Setting**: Select All Disks Shared or Manual Media Server Path.
Using Network Place (Samba) Share service

Network Place (Samba) Share allows you to set up the accounts and permissions for the Samba service.

To use Samba share:

1. From the navigation panel, go to General > USB Application > Media Services and Servers > Network Place (Samba) Share tab.

   **NOTE:** Network Place (Samba) Share is enabled by default.

2. Follow the steps below to add, delete, or modify an account.

   **To create a new account:**
   
   a) Click to add new account.
   
   b) In the **Account** and **Password** fields, key in the name and password of your network client. Retype the password to confirm. Click **Add** to add the account to the list.
To delete an existing account:
a) Select the account that you want to delete.
b) Click \( \text{삭제} \).
c) When prompted, click \textbf{Delete} to confirm the account deletion.

To add a folder:
a) Click \( \text{더하기} \).
b) Enter the folder name, and click \textbf{Add}. The folder that you created will be added to the folder list.

3. From the list of folders, select the type of access permission that you want to assign for specific folders:
   - \textbf{R/W}: Select this option to assign read/write access.
   - \textbf{R}: Select this option to assign read-only access.
   - \textbf{No}: Select this option if you do not want to share a specific file folder.

4. Click \textbf{Apply} to apply the changes.
Using the FTP Share service

FTP share enables an FTP server to share files from USB disk to other devices via your local area network or via the Internet.

IMPORTANT!

- Ensure that you safely remove the USB disk. Incorrect removal of the USB disk may cause data corruption.
- To safely remove the USB disk, refer to the section Safely removing the USB disk under 3.1.3 Monitoring your USB device.

To use FTP Share service:

NOTE: Ensure that you have set up your FTP server through AiDisk. For more details, refer to the section 3.5.1 Using AiDisk.

1. From the navigation panel, click General > USB Application > Media Services and Servers > FTP Share tab.
2. From the list of folders, select the type of access rights that you want to assign for specific folders:
   - **R/W**: Select to assign read/write access for a specific folder.
   - **R**: Select to assign read only access for a specific folder.
   - **No**: Select this option if you do not want to share a specific folder.
3. If you prefer, you can set the **Allow anonymous login** field to **ON**.

4. In the **Maximum number of concurrent connections** field, key in the number of devices that can simultaneously connect to the FTP share server.

5. Click **Apply** to confirm the changes.

6. To access the FTP server, key in the ftp link `ftp://<hostname>.asuscomm.com` and your user name and password on a web browser or a third-party FTP utility.

### 3.5.3 3G/4G

3G/4G USB modems can be connected to DSL-AC87VG to allow Internet access.

**NOTE:** For a list of verified USB modems, please visit: [https://www.asus.com/event/networks_3G4G_support/](https://www.asus.com/event/networks_3G4G_support/)

**To set up 3G/4G internet access:**

1. From the navigation panel, click **General > USB Application > 3G/4G**.

2. From the Internet Connection screen, configure the settings for your USB modem. Obtain the data about your USB modem from your Internet service provider (ISP).

3. Click **Apply** to save the settings made.
3.6 Using AiCloud 2.0

AiCloud 2.0 is a cloud service app that allows you to save, sync, share, and access your files.

To use AiCloud 2.0:
1. From Google Play Store or Apple Store, download and install the ASUS AiCloud app to your smart device.
2. Connect your smart device to your network. Follow the instructions to complete the AiCloud setup process.
3.6.1 Cloud Disk

To create a cloud disk:

1. Insert a USB storage device into the wireless router.
2. Turn on **Cloud Disk**.
3. Go to [https://router.asus.com](https://router.asus.com) and enter the router login account and password. For better user experience, we recommend that you use Google Chrome or Firefox.
4. You can now start accessing Cloud Disk files on devices connected to the network.

**NOTE:** When accessing the devices that are connected to the network, you need to enter the device’s user name and password manually, which will not be saved by AiCloud for security reason.

### 3.6.2 Smart Access

The Smart Access function allows you to easily access your home network via your router’s domain name.
NOTES:

- You can create a domain name for your router with ASUS DDNS. For more details, refer to section 4.3.5 DDNS.
- By default, AiCloud provides a secure HTTPS connection. Key in https://[yourASUSDDNSname].asuscomm.com for a very secure Cloud Disk and Smart Access usage.

### 3.6.3 Smart Sync

To use Smart Sync:

1. Launch AiCloud, click **Smart Sync > Go**.
2. Select **ON** to enable Smart Sync.
3. Click **Add new account**.
4. Enter your ASUS WebStorage account password and select the directory that you want to sync with WebStorage.
5. Click **Apply**.
3.7 Using Telephony

The Telephony function allows you to connect compatible devices such as common analog phones, DECT phones, FAX machines, and IP phones to your DSL-AC87VG.

3.7.1 Setting up your phones

Configuring an internal phone

To configure an internal phone:
1. From the navigation panel, click **Telephony > Phone Device**.
2. Click **Add Device** to add a new phone.

**NOTES:**
- When using the Telephony function for the first time, the outgoing number field is empty.
- When you also want to use an IP phone for outgoing calls, assign the outgoing number. For details, refer to the section **Assigning an outgoing number**.
3. Tick **IP Phone**.
4. Fill in the necessary information.
5. When done, click **Apply**. The internal number is assigned by the phone.

**NOTES:**

- To check for the internal number of an internal phone, go to **Telephony > Phone Device**.
- For details on using the internal phone, refer to the section **Making internal calls**.
Registering your DECT phone

To register your DECT phone:

1. From the navigation panel, click Telephony > Phone Device.
2. Click to add a new phone.
3. Tick DECT, then click Register.
4. Wait until the registration process is completed.
5. Fill in the necessary information.
6. When done, click **Apply**.

**Configuring your DECT phone**

**To configure your DECT phone:**
1. From the navigation panel, click **Telephony > DECT**.
2. Configure your preferred DECT settings.

**NOTE:** By default, the PIN code of the base station is **0000**.
Assigning an outgoing number

Assign outgoing phone numbers to your phones to make outgoing calls from phones connected to your DSL-AC87VG.

To assign an outgoing number:

1. From the navigation panel, click **Telephony > Phone Number**.
2. Click to add a new phone.
3. Fill in the information for these required fields: **Phone Number**, **User Name**, **Password**, **User Domain**, **Registrar**, and **Proxy***. 
4. Click **Advanced Setting** to configure the advanced settings of your phone.

5. Configure the following advanced settings:
   - **WAN Interface**: Select the WAN interface that you want to use for your phone.
   - **Prefix**: Assign the prefix number that you want to assign for outgoing calls.
   - **Caller ID restriction**: Select the caller ID type.
   - **SIP DSCP**: Enter the SIP DSCP.
   - **RTP/RTCP DSCP**: Enter the RTP/RTCP DSCP.

**NOTE**: * Obtain the necessary information from your VoIP service provider.

6. When done, click **Apply**. A checkmark in the Status column indicates that you have successfully assigned a phone number to your phone.

7. Follow steps 1 to 6 to assign more phone numbers to more phones.
Modifying or deleting a phone number

To modify or delete a phone number:

1. From the navigation panel, click **Telephony > Phone Number**.

2. Click 📜 to edit the settings of your selected device. Click 🗑️ to delete your selected device.
3.7.2 Using the answering machine

Configuring the answering machine

NOTES:

• By default, calls that are not answered after 40 seconds are automatically forwarded to the answering machine.
• Ensure that you have recorded your voice mail greeting for the answering machine. For more details, refer to Recording your voicemail greeting.

IMPORTANT!

• The answering machine only supports G.711 a-law (PCMA) codec.
• If you are using a softphone, enable the telephone-event (RFC-2833) on your softphone.

To configure the answering machine:

1. From the navigation panel, click Telephony > Answering machine > Answering machine.
2. On the Enable Answering Machine field, ensure that the slider is set to ON.
3. On the No Answer Time field, set the time (in seconds) that incoming calls are automatically forwarded to the answering machine.
4. When done, click Apply.
Recording your voicemail greeting

To record your voice mail greeting:
1. On your phone, dial *992#, then speak your message after the beep. After you hang up, your recorded message appears on the Greeting Message list.
2. You can play, edit, or delete your recorded message from Telephony > Answering machine > Greeting Message.

Listening to or deleting your voicemails

To listen to or delete your voice mails:
1. From the navigation panel, click Telephony > Answering machine > Voice Message.

2. Click 🎧 to listen to a voicemail. Click 🗑️ to delete a voicemail.

NOTE: You can also dial *911# on your internal phone to listen to your voicemail.
Emailing your voicemails

To email your voicemails:

1. From the navigation panel, click **Telephony > Answering machine > Message Forwarding**.

![Image of the Telephony - Answering Machine interface](image)

2. On the **Enable Message Forwarding to Email** field, ensure that the slider is set to **ON**.

3. Fill in the necessary information.

4. When done, click **Apply**.

5. Your voicemails will be forwarded to your target email address as MP3 audio attachments.
3.7.3 Creating your contact list

To create your contact list:

1. From the navigation panel, click **Telephony > Phone Book**.

2. Click ‌ to add a new contact. You can add up to three (3) phone numbers to a contact.

3. Fill in the necessary information.

4. When done, click **Apply**.

3.7.4 Making an internal call

To make an internal call:

1. Ensure that you have the correct internal number for the internal phone that you want to call.

   **NOTE:** To check for the internal number of an internal phone, go to **Telephony > Phone Device**.

2. From an internal phone, dial asterisk (*) twice, then the internal number of the other internal phone.

   For example, you want to call Phone 2 (internal number is 12) from Phone 1. From Phone 1, dial [**] + [12].
3.7.5 Making an outgoing call

To make an outgoing call:
1. Ensure that you have assigned a phone number to your phone.

   NOTE: For more details, refer to Assigning a phone number.

2. Dial the number/pound sign (#), phone's prefix number, number/pound sign (#), and the number you want to call.
   For example, the prefix number for phone 2 is 81, you would need to dial: [#81#] + [callee’s phone number].

3.7.6 Managing your calls

Defining the call blocking rules

To define the call blocking rules:
1. From the navigation panel, click Telephony > Call Control > Call Blocking.
2. Click to set the blocking rule for incoming or outgoing calls.
3. Define the call blocking rule, then click **Apply**.

4. Select the call blocking rule that you want to activate, then click **Apply**.

**NOTE:** When you activate the **Anonymous Calls** profile, all incoming calls without caller IDs are blocked.
Defining the call forwarding rules

To define the call forwarding rules:
1. From the navigation panel, click **Telephony > Call Control > Forwarding**.
2. Click 🔄 to set the call forwarding rule.

3. Configure the call forwarding rules, then click **Apply**.
4 Configuring the Advanced Settings

4.1 Wireless

4.1.1 General

The General tab allows you to configure the basic wireless settings.

To configure the basic wireless settings:

1. From the navigation panel, go to Advanced Settings > Wireless > General tab.

2. Select 2.4GHz or 5GHz as the frequency band for your wireless network.

3. Assign a unique name containing up to 32 characters for your SSID (Service Set Identifier) or network name to identify your wireless network. Wi-Fi devices can identify and connect to the wireless network via your assigned SSID. The SSIDs on the information banner are updated once new SSIDs are saved to the settings.

NOTE: You can assign unique SSIDs for the 2.4 GHz and 5GHz frequency bands.
4. In the **Hide SSID** field, select **Yes** to prevent wireless devices from detecting your SSID. When this function is enabled, you would need to enter the SSID manually on the wireless device to access the wireless network.

5. Select any of these wireless mode options to determine the types of wireless devices that can connect to your wireless router:
   - **Auto**: Select Auto to allow 802.11ac, 802.11n, 802.11g, and 802.11b devices to connect to the wireless router.
   - **N only**: Select **N only** to maximize wireless N performance. This setting prevents 802.11g and 802.11b devices from connecting to the wireless router.

6. Select the channel/extension channel for your wireless router. Select **Auto** to allow the wireless router to automatically select the channel that has the least amount of interference.

7. Select the channel bandwidth to accommodate higher transmission speeds.

8. Select the authentication method.

9. When done, click **Apply**.
4.1.2 WPS

WPS (Wi-Fi Protected Setup) is a wireless security standard that allows you to easily connect devices to a wireless network. You can configure the WPS function via the PIN code or WPS button.

NOTE: Ensure that the devices support WPS.

To enable WPS on your wireless network:

1. From the navigation panel, go to Advanced Settings > Wireless > WPS tab.
2. In the Enable WPS field, move the slider to ON for the 2.4GHz or 5GHz frequency band.

NOTE: WPS supports authentication using Open System, WPA-Personal, and WPA2-Personal. WPS does not support a wireless network that uses a Shared Key, WPA-Enterprise, WPA2-Enterprise, and RADIUS encryption method.
3. In the WPS Method field, select **Push Button** or **Client PIN** code. If you select **Push Button**, go to step 4. If you select **Client PIN** code, go to step 5.

4. To set up WPS using the router’s WPS button, follow these steps:
   a. Click **Start** or press the WPS button found at the rear of the wireless router.
   b. Press the WPS button on your wireless device. This is normally identified by the WPS logo.

   **NOTE:** Check your wireless device or its user manual for the location of the WPS button.

   c. The wireless router will scan for any available WPS devices. If the wireless router does not find any WPS devices, it will switch to standby mode.

5. To set up WPS using the Client’s PIN code, follow these steps:
   a. Locate the WPS PIN code on your wireless device’s user manual or on the device itself.
   b. Key in the Client PIN code on the text box.
   c. Click **Start** to put your wireless router into WPS survey mode. The router’s LED indicators quickly flash three times until the WPS setup is completed.
4.1.3 Wireless MAC Filter

Wireless MAC filter provides control over packets transmitted to a specified MAC (Media Access Control) address on your wireless network.

To set up the Wireless MAC filter:

1. From the navigation panel, go to Advanced Settings > Wireless > Wireless MAC Filter tab.
2. From the Frequency list, select the frequency band that the settings will be applied to.
3. Tick Yes in the Enable Mac Filter field.
4. In the MAC Filter Mode dropdown list, select either Accept or Reject.
   • Select Accept to allow devices in the MAC filter list to access to the wireless network.
   • Select Reject to prevent devices in the MAC filter list to access to the wireless network.
5. On the MAC filter list, click the Add button and key in the MAC address of the wireless device.
6. Click Apply.
4.1.4 Professional

The Professional screen provides advanced configuration options.

NOTE: We recommend that you use the default values on this page.

In the **Professional Settings** screen, you can configure the following:

- **Frequency**: Select the frequency band that the professional settings will be applied to.
- **Enable Radio**: Select **Yes** to enable wireless networking. Select **No** to disable wireless networking.
- **Enable wireless scheduler**: Select **Yes** to enable the wireless scheduler function. When enabled, the following items appear:
  - **Date to Enable Radio (week days)**: You can specify which days of the week wireless networking is enabled.
  - **Time of Day to Enable Radio**: You can specify a time range when wireless networking is enabled during the week.
  - **Time of Day to Enable Radio**: You can specify a time range when wireless networking is enabled during the weekend.
- **Set AP isolated**: The Set AP isolated item prevents wireless devices on your network from communicating with each other. This feature is useful if many guests frequently join or leave your network. Select **Yes** to enable this feature or select **No** to disable.

- **Enable IGMP Snooping**: Enable this function allows the IGMP (Internet Group Management Protocol) to be monitored among devices and optimizes wireless multicast traffic.

- **DTIM Interval**: DTIM (Delivery Traffic Indication Message) Interval or Data Beacon Rate is the time interval before a signal is sent to a wireless device in sleep mode indicating that a data packet is awaiting delivery. The default value is three milliseconds.

- **Beacon Interval**: Beacon Interval is the time between one DTIM and the next. The default value is 100 milliseconds. Lower the Beacon Interval value for an unstable wireless connection or for roaming devices.

- **TX Power adjustment**: TX Power adjustment refers to the milliWatts (mW) needed to power the radio signal output of the wireless router. Enter a value between 0 to 100.

**NOTE**: Increasing the TX Power adjustment values may affect the stability of the wireless network.
4.2 LAN

4.2.1 LAN IP

The LAN IP screen allows you to modify the LAN IP settings of your wireless router.

**NOTE:** Any changes to the LAN IP address will be reflected on your DHCP settings.

To modify the LAN IP settings:

1. From the navigation panel, go to Advanced Settings > LAN > LAN IP tab.
2. Modify the **IP address** and **Subnet Mask**.
3. When done, click **Apply**.
4.2.2 DHCP Server

Your wireless router uses DHCP to assign IP addresses automatically on your network. You can specify the IP address range and lease time for the clients on your network.

To configure the DHCP server:
1. From the navigation panel, go to Advanced Settings > LAN > DHCP Server tab.
2. In the Enable the DHCP Server field, tick Yes.
3. In the Domain Name text box, enter a domain name for the wireless router.
4. In the IP Pool Starting Address field, key in the starting IP address.
5. In the IP Pool Ending Address field, key in the ending IP address.
6. In the Lease Time field, specify in seconds when an assigned IP address will expire. Once it reaches this time limit, the DHCP server will then assign a new IP address.
NOTES:

- We recommend that you use an IP address format of 192.168.1.xxx (where xxx can be any number between 2 and 254) when specifying an IP address range.
- An IP Pool Starting Address should not be greater than the IP Pool Ending Address.

7. When done, click Apply.

4.2.3 Route

If your network makes use of more than one wireless router, you can configure a routing table to share the same Internet service.

NOTE: We recommend that you do not change the default route settings unless you have advanced knowledge of routing tables.

To configure the LAN Routing table:

1. From the navigation panel, go to Advanced Settings > LAN > Route tab.
2. On the Enable static routes field, choose Yes.
3. On the **Static Route List**, enter the network information of other access points or nodes. Click the Add or Delete button to add or remove a device on the list.

4. Click **Apply**.

### 4.2.4 IPTV

The wireless router supports connection to IPTV services through an ISP or a LAN. The IPTV tab provides the configuration settings needed to set up IPTV, VoIP, multicasting, and UDP for your service. Contact your ISP for specific information regarding your service.
4.3 WAN

4.3.1 Internet Connection

The Internet Connection screen allows you to configure the settings of your USB 3G/4G modem.

NOTES:

• Obtain the information about your USB modem from your Internet service provider (ISP).
• For more details about the 3G/4G function of your DSL-AC87VG, please refer to the section 3.5.3. 3G/4G.
4.3.2 Dual WAN

Your ASUS DSL-AC87VG provides dual WAN support. You can set the dual WAN feature to this mode:

- **Failover Mode:** Select this mode to use the secondary WAN as the backup network access.
4.3.3 Port Trigger

Port range triggering opens a predetermined incoming port for a limited period of time whenever a client on the local area network makes an outgoing connection to a specified port. Port triggering is used in the following scenarios:

- More than one local client needs port forwarding for the same application at a different time.
- An application requires specific incoming ports that are different from the outgoing ports.

To set up Port Trigger:

1. From the navigation panel, go to Advanced Settings > WAN > Port Trigger tab.
2. On the Enable Port Trigger field, tick Yes.
3. On the Well-Known Applications field, select the popular games and web services to add to the Port Trigger List.
4. On the **Trigger Port List** table, key in the following information:

   - **Description**: Enter a short name or description for the service.
   - **Trigger Port**: Specify a trigger port to open the incoming port.
   - **Protocol**: Select the protocol, TCP, or UDP.
   - **Incoming Port**: Specify an incoming port to receive inbound data from the Internet.
   - **Protocol**: Select the protocol, TCP, or UDP.

5. Click the **Add** button to enter the port trigger information to the list. Click the **Delete** button to remove a port trigger entry from the list.

6. When done, click **Apply**.

**NOTES:**

- When connecting to an IRC server, a client PC makes an outgoing connection using the trigger port range 1~65535. The IRC server responds by verifying the username and creating a new connection to the client PC using an incoming port.

- If Port Trigger is disabled, the router drops the connection because it is unable to determine which PC is requesting for IRC access. When Port Trigger is enabled, the router assigns an incoming port to receive the inbound data. This incoming port closes once a specific time period has elapsed because the router is unsure when the application has been terminated.

- Port triggering only allows one client in the network to use a particular service and a specific incoming port at the same time.

- You cannot use the same application to trigger a port in more than one PC at the same time. The router will only forward the port back to the last computer to send the router a request/trigger.
4.3.4 Virtual Server/Port Forwarding

Port forwarding is a method to direct network traffic from the Internet to a specific port or a specific range of ports to a device or number of devices on your local network. Setting up Port Forwarding on your router allows PCs outside the network to access specific services provided by a PC in your network.

**NOTE:** When port forwarding is enabled, the ASUS router blocks unsolicited inbound traffic from the Internet and only allows replies from outbound requests from the LAN. The network client does not have access to the Internet directly, and vice versa.

To set up Port Forwarding:

1. From the navigation panel, go to **Advanced Settings > WAN > Virtual Server / Port Forwarding** tab.
2. On the **Enable Port Forwarding** field, tick **Yes**.
3. On the **Famous Server List** field, select the type of service you want to access.

4. On the **Famous Game List** field, select the popular game that you want to access. This item lists the port required for your selected popular online game to work properly.

5. On the **Port Forwarding List** table, key in the following information:
   - **Service Name**: Enter a service name.
   - **Port Range**: If you want to specify a Port Range for clients on the same network, enter the Service Name, the Port Range (e.g. 10200:10300), the LAN IP address, and leave the Local Port empty. Port range accepts various formats such as Port Range (300:350), individual ports (566,789) or Mix (1015:1024,3021).

**NOTES:**

- When your network’s firewall is disabled and you set 80 as the HTTP server’s port range for your WAN setup, then your http server/web server would be in conflict with the router’s web user interface.

- A network makes use of ports in order to exchange data, with each port assigned a port number and a specific task. For example, port 80 is used for HTTP. A specific port can only be used by one application or service at a time. Hence, two PCs attempting to access data through the same port at the same time would fail. For example, you cannot set up Port Forwarding for port 100 for two PCs at the same time.

- **Local IP**: Key in the client’s LAN IP address.

**NOTE**: Use a static IP address for the local client to make port forwarding work properly. Refer to section 4.2 LAN for information.
• **Local Port**: Enter a specific port to receive forwarded packets. Leave this field blank if you want the incoming packets to be redirected to the specified port range.
• **Protocol**: Select the protocol. If you are unsure, select BOTH.

5. Click the Add button to enter the port trigger information to the list. Click the Delete button to remove a port trigger entry from the list.

6. When done, click **Apply**.

**To check if Port Forwarding has been configured successfully:**

• Ensure that your server or application is set up and running.
• You will need a client outside your LAN but has Internet access (referred to as “Internet client”). This client should not be connected to the ASUS router.
• On the Internet client, use the router’s WAN IP to access the server. If port forwarding has been successful, you should be able to access the files or applications.

**Differences between port trigger and port forwarding:**

• Port triggering will work even without setting up a specific LAN IP address. Unlike port forwarding, which requires a static LAN IP address, port triggering allows dynamic port forwarding using the router. Predetermined port ranges are configured to accept incoming connections for a limited period of time. Port triggering allows multiple computers to run applications that would normally require manually forwarding the same ports to each PC on the network.
• Port triggering is more secure than port forwarding since the incoming ports are not open all the time. They are opened only when an application is making an outgoing connection through the trigger port.
4.3.5 DMZ

Virtual DMZ exposes one client to the Internet, allowing this client to receive all inbound packets directed to your Local Area Network.

Inbound traffic from the Internet is usually discarded and routed to a specific client only if port forwarding or a port trigger has been configured on the network. In a DMZ configuration, one network client receives all inbound packets.

Setting up DMZ on a network is useful when you need incoming ports open or you want to host a domain, web, or e-mail server.

**CAUTION:** Opening all the ports on a client to the Internet makes the network vulnerable to outside attacks. Please be aware of the security risks involved in using DMZ.

**To set up DMZ:**

1. From the navigation panel, go to **Advanced Settings > WAN > DMZ** tab.
2. Configure the setting below. When done, click **Apply**.
   - **IP address of Exposed Station:** Key in the client’s LAN IP address that will provide the DMZ service and be exposed on the Internet. Ensure that the server client has a static IP address.

**To remove DMZ:**

1. Delete the client’s LAN IP address from the **IP Address of Exposed Station** text box.
2. When done, click **Apply**.
4.3.6 DDNS

Setting up DDNS (Dynamic DNS) allows you to access the router from outside your network through the provided ASUS DDNS Service or another DDNS service.

To set up DDNS:
1. From the navigation panel, go to Advanced Settings > WAN > DDNS tab.
2. Configure the following settings below. When done, click Apply.
   - **Enable the DDNS Client**: Enable DDNS to access the ASUS router via the DNS name rather than WAN IP address.
   - **Server and Host Name**: Choose ASUS DDNS or other DDNS. If you want to use ASUS DDNS, fill in the Host Name in the format of xxx.asuscomm.com (xxx is your host name).
• **Enable wildcard**: Enable wildcard if your DDNS service requires one.

**NOTES:**

DDNS service will not work under these conditions:

- When the wireless router is using a private WAN IP address (192.168.x.x, 10.x.x.x, or 172.16.x.x), as indicated by a yellow text.
- The router may be on a network that uses multiple NAT tables.

### 4.3.7 NAT Passthrough

NAT Passthrough allows a Virtual Private Network (VPN) connection to pass through the router to the network clients. PPTP Passthrough, L2TP Passthrough, IPsec Passthrough and RTSP Passthrough are enabled by default.

To enable / disable the NAT Passthrough settings, go to the **Advanced Settings > WAN > NAT Passthrough** tab. When done, click **Apply**.
4.4 IPv6

This wireless router supports IPv6 addressing, a system that supports more IP addresses. This standard is not yet widely available. Contact your ISP if your Internet service supports IPv6.

To set up IPv6:

1. From the navigation panel, go to **Advanced Settings > IPv6**.
2. Select your **Connection Type**. The configuration options vary depending on your selected connection type.
3. Enter your IPv6 LAN and DNS settings.
4. Click **Apply**.

**NOTE**: Please refer to your ISP regarding specific IPv6 information for your Internet service.
4.5 VPN Server

VPN (Virtual Private Network) provides a secure communication to a remote computer or remote network using a public network such as the Internet.

NOTE: Before setting up a VPN connection, you would need the IP address or domain name of the VPN server you are trying to access.

To set up access to a VPN server:

1. From the navigation panel, go to Advanced Settings > VPN Server.
2. On the Enable VPN Server field, select Yes.
3. On the VPN Details dropdown list, select Advanced Settings if you want to configure advanced VPN settings such as broadcast support, authentication, MPPE Encryption, and Client IP address range.
4. On the Network Place (Samba) Support field, select Yes.
5. Enter the user name and password for accessing the VPN server. Click the button.
6. Click Apply.
4.6 Firewall

The wireless router can serve as a hardware firewall for your network.

**NOTE:** The Firewall feature is enabled by default.

4.6.1 General

To set up basic Firewall settings:

1. From the navigation panel, go to **Advanced Settings > Firewall > General** tab.

2. On the **Enable Firewall** field, select **Yes**.

3. On the **Enable DoS protection** field, select **Yes** to protect your network from DoS (Denial of Service) attacks though this may affect your router’s performance.

4. On the **Respond Ping Request from Wan** field, select **Yes**.

5. Click **Apply**.
4.6.2 URL Filter

You can specify keywords or web addresses to prevent access to specific URLs.

NOTE: The URL Filter is based on a DNS query. If a network client has already accessed a website such as http://www.abcxxx.com, then the website will not be blocked (a DNS cache in the system stores previously visited websites). To resolve this issue, clear the DNS cache before setting up the URL Filter.

To set up a URL filter:

1. From the navigation panel, go to Advanced Settings > Firewall > URL Filter tab.
2. On the Enable URL Filter field, select Enabled.
3. Enter a URL and click the button.
4. Click Apply.
4.6.3 Network Services Filter

The Network Services Filter blocks LAN to WAN packet exchanges and restricts network clients from accessing specific web services such as Telnet or FTP.

To set up a Network Service filter:

1. From the navigation panel, go to Advanced Settings > Firewall > Network Service Filter tab.
2. On the Enable Network Services Filter field, select Yes.
3. Select the Filter table type. **Black List** blocks the specified network services. **White List** limits access to only the specified network services.
4. Specify the day and time when the filters will be active.
5. To specify a Network Service to filter, enter the Source IP, Destination IP, Port Range, and Protocol. Click the button.
6. Click Apply.
4.7 Administration

4.7.1 System

The **System** page allows you to configure your wireless router settings.

To set up the System settings:

1. From the navigation panel, go to **Advanced Settings > Administration > System** tab.

2. You can configure the following settings:
   - **Change router login password**: You can change the password and login name for the wireless router by entering a new name and password.
   - **WPS Button behavior**: You can select **Turn LED On/Off** or **Activate WPS**.
   - **Enable Reboot Schedule**: Select **Yes** to set the reboot schedule.
   - **Time Zone**: Select the time zone for your network.
   - **NTP Server**: The wireless router can access a NTP (Network time Protocol) server in order to synchronize the time.
   - **Enable Web Access from WAN**: Select **Yes** to allow devices outside the network to access the wireless router GUI settings. Select **No** to prevent access.
• **Enable Web Access from WAN**: Select **Yes** to allow devices outside the network to access the wireless router GUI settings. Select **No** to prevent access.

• **Auto Logout**: Set the time (in minutes) that you want to automatically logout from the web GUI after some period of inactivity.

3. Click **Apply**.

### 4.7.2 Firmware Upgrade

**NOTE**: Download the latest firmware from the ASUS website at [http://www.asus.com](http://www.asus.com)

To upgrade the firmware:

1. From the navigation panel, go to **Advanced Settings** > **Administration** > **Firmware Upgrade** tab.

2. In the **New Firmware File** field, click **Browse** to locate the downloaded file.

3. Click **Upload**.
NOTES:

• When the upgrade process is complete, wait for some time for the system to reboot.
• If the upgrade process fails, follow the Rescue mode process. For more details, refer to Restoring the firmware via the Rescue mode under 5.1 Basic Troubleshooting.

4.7.3 Restore/Save/Upload Setting

To restore/save/upload wireless router settings:

1. From the navigation panel, go to Advanced Settings > Administration > Restore/Save/Upload Setting tab.
2. Select the tasks that you want to do:
   • To restore to the default factory settings, click Restore, and click OK in the confirmation message.
   • To save the current system settings, click Save, navigate to the folder where you intend to save the file and click Save.
   • To restore from a saved system settings file, click Browse to locate your file, then click Upload.

If issues occur, upload the latest firmware version and configure new settings. Do not restore the router to its default settings.
4.7.4 DSL Setting

Modify your DSL settings from this page.

**IMPORTANT!** Obtain your DSL settings from your Internet service provider (ISP) before doing any changes.

4.7.5 Feedback

You can send your comments, suggestions, issues, or feedbacks to the ASUS Support Team.
4.8 System Log

System Log contains your recorded network activities.

**NOTE:** System log resets when the router is rebooted or powered off.

To view your system log:

1. From the navigation panel, go to **Advanced Settings > System Log**.
2. You can view your network activities in any of these tabs:
   - General Log
   - DHCP Leases
   - Wireless Log
   - Port Forwarding
   - Routing Table
5 Troubleshooting

This chapter provides solutions for issues you may encounter with your router. If you encounter problems that are not mentioned in this chapter, visit the ASUS support site at: http://support.asus.com/ for more product information and contact details of ASUS Technical Support.

5.1 Basic Troubleshooting

If you are having problems with your router, try these basic steps in this section before looking for further solutions.

Upgrade Firmware to the latest version.

1. Launch the Web GUI. Go to Advanced Settings > Administration > Firmware Upgrade tab. Click Check to verify if the latest firmware is available.

2. If the latest firmware is available, visit the ASUS global website at http://www.asus.com/Networks/Wireless_Routers/RTAC5300/#download to download the latest firmware.

3. From the Firmware Upgrade page, click Browse to locate the firmware file.

4. Click Upload to upgrade the firmware.

Restoring the firmware via the Rescue mode.

If the firmware upgrade fails, do the Rescue mode process. Please follow these steps:

1. Ensure that your computer has a static IP address such as 192.168.1.xx (xx can be any number between 2 and 254).

2. Turn off your DSL-AC87VG. Hold the Reset button then power on your device for five seconds. When the power LED blinks, release the Reset button.

3. On your web browser, enter http://192.168.1.1

![Interface Image](image)

3. From the interface, click **Choose File**, and browse for your firmware file.

**NOTE**: You can download the latest firmware file from the ASUS Support site at **http://www.asus.com/support**

4. Click **Update Software**. The process takes about two minutes to complete.

5. After the process is completed, the login page appears. If it does not appear, enter **http://192.168.1.1** on your web browser.

![Login Image](image)
**Restart your network in the following sequence:**

1. Turn off the modem.
2. Unplug the modem.
3. Turn off the router and computers.
4. Plug in the modem.
5. Turn on the modem and then wait for 2 minutes.
6. Turn on the router and then wait for 2 minutes.
7. Turn on computers.

**Check if your Ethernet cables are plugged properly.**

- When the Ethernet cable connecting the router with the modem is plugged in properly, the WAN LED will be on.
- When the Ethernet cable connecting your powered-on computer with the router is plugged in properly, the corresponding LAN LED will be on.

**Check if the wireless setting on your computer matches that of your computer.**

- When you connect your computer to the router wirelessly, ensure that the SSID (wireless network name), encryption method, and password are correct.

**Check if your network settings are correct.**

- Each client on the network should have a valid IP address. ASUS recommends that you use the wireless router’s DHCP server to assign IP addresses to computers on your network.
- Some cable modem service providers require you to use the MAC address of the computer initially registered on the account. You can view the MAC address in the web GUI, **Network Map > Clients** page, and hover the mouse pointer over your device in **Client Status**.
5.2 Frequently Asked Questions (FAQs)

Can I change my internal number?
No, it cannot be changed. The phone device assigns the internal number.

Can I make an internal call?
You can make internal calls. Calls can be made between phone devices connected to DSL-AC87CG such as regular phones, VoIP, or DECT phones via the internal numbers.

The outgoing number does not appear.
The outgoing number appears only when the phone number setup is completed.

Can I assign several outgoing numbers?
• You can assign several different outgoing numbers to phone devices from Telephony > Phone Number. For details, refer to the section Assigning an outgoing number.
• When you make an outgoing call, the outgoing number appears on the callee’s phone.
• You will only be able to make outgoing calls when you assign outgoing numbers.

Can I edit the outgoing and incoming numbers?
• You can edit the outgoing and incoming numbers. To do this, go to Telephony > Phone Device, and click beside the number you want to edit.
I cannot access the router GUI using a web browser

- If your computer is wired, check the Ethernet cable connection and LED status as described in the previous section.

- Ensure that you are using the correct login information. The default factory login name and password is “admin/admin”. Ensure that the Caps Lock key is disabled when you enter the login information.

- Delete the cookies and files in your web browser. For Internet Explorer 8, follow these steps:
  1. Launch Internet Explorer 8, then click Tools > Internet Options.
  2. In the General tab, under Browsing history, click Delete…, select Temporary Internet Files and Cookies then click Delete.

NOTES:

- The commands for deleting cookies and files vary with web browsers.

- Disable proxy server settings, cancel the dial-up connection, and set the TCP/IP settings to obtain IP addresses automatically. For more details, refer to Chapter 1 of this user manual.

- Ensure that you use CAT5e or CAT6 ethernet cables.
The client cannot establish a wireless connection with the router.

NOTE: If you are having issues connecting to 5Ghz network, make sure that your wireless device supports 5Ghz or features dual band capabilities.

• **Out of Range:**
  • Move the router closer to the wireless client.
  • Try to adjust antennas of the router to the best direction as described in section 1.4 Positioning your router.

• **DHCP server has been disabled:**
  1. Launch the web GUI. Go to **General > Network Map > Clients** and search for the device that you want to connect to the router.
  2. If you cannot find the device in the **Network Map**, go to **Advanced Settings > LAN > DHCP Server, Basic Config list**, select Yes on the **Enable the DHCP Server**.
• SSID has been hidden. If your device can find SSIDs from other routers but cannot find your router’s SSID, go to Advanced Settings > Wireless > General, select No on Hide SSID, and select Auto on Channel.

• If you are using a wireless LAN adapter, check if the wireless channel in use conforms to the channels available in your country/area. If not, adjust the channel, channel bandwidth, and wireless mode.

• If you still cannot connect to the router wirelessly, you can reset your router to factory default settings. In the router GUI, click Administration > Restore/Save/Upload Setting and click Restore.
Internet is not accessible.

- Check if your router can connect to your ISP’s WAN IP address. To do this, launch the web GUI and go to **General > Network Map**, and check the **Internet Status**.

- If your router cannot connect to your ISP’s WAN IP address, try restarting your network as described in the section **Restart your network in following sequence** under **Basic Troubleshooting**.

- The device has been blocked via the Parental Control function. Go to **General > Parental Control** and see if the device is in the list. If the device is listed under **Client Name**, remove the device using the **Delete** button or adjust the Time Management Settings.

- If there is still no Internet access, try to reboot your computer and verify the network’s IP address and gateway address.

- Check the status indicators on the ADSL modem and the wireless router. If the WAN LED on the wireless router is not ON, check if all cables are plugged properly.

You forgot the SSID (network name) or network password

- Setup a new SSID and encryption key via a wired connection (Ethernet cable). Launch the web GUI, go to **Network Map**, click the router icon, enter a new SSID and encryption key, and then click **Apply**.

- Reset your router to the default settings. Launch the web GUI, go to **Administration > Restore/Save/Upload Setting**, and click **Restore**. The default login account and password are both “admin”.
How to restore the system to its default settings?

- Go to **Administration > Restore/Save/Upload Setting**, and click **Restore**.

The following are the factory default settings:

**User Name:** admin  
**Password:** admin  
**Enable DHCP:** Yes (if WAN cable is plugged in)  
**IP address:** http://router.asus.com (or 192.168.1.1)  
**Domain Name:** (Blank)  
**Subnet Mask:** 255.255.255.0  
**DNS Server 1:** (Blank)  
**DNS Server 2:** (Blank)  
**SSID (2.4GHz):** ASUS_[Last two bytes of Mac]_2G  
**SSID (5GHz):** ASUS_[Last two bytes of Mac]_5G
Cannot access Web GUI

Before configuring your wireless router, do the steps described in this section for your host computer and network clients.

A. Disable the proxy server, if enabled.

Windows® 7

1. Click **Start > Internet Explorer** to launch the browser.

2. Click **Tools > Internet options > Connections tab > LAN settings.**

3. From the Local Area Network (LAN) Settings screen, untick **Use a proxy server for your LAN.**

4. Click **OK** when done.
MAC OS

1. From your Safari browser, click Safari > Preferences > Advanced > Change Settings...

2. From the Network screen, deselect FTP Proxy and Web Proxy (HTTP).

3. Click Apply Now when done.

NOTE: Refer to your browser's help feature for details on disabling the proxy server.

B. Set the TCP/IP settings to automatically obtain an IP address.

Windows® 7

1. Click Start > Control Panel > Network and Internet > Network and Sharing Center > Manage network connections.

3. To obtain the IPv4 IP settings automatically, tick **Obtain an IP address automatically**.

   To obtain the IPv6 IP settings automatically, tick **Obtain an IPv6 address automatically**.

4. Click **OK** when done.

### MAC OS

1. Click the Apple icon located on the top left of your screen.

2. Click **System Preferences > Network > Configure...**

3. From the **TCP/IP** tab, select **Using DHCP** in the **Configure IPv4** dropdown list.

4. Click **Apply Now** when done.

**NOTE:** Refer to your operating system’s help and support feature for details on configuring your computer’s TCP/IP settings.
C. Disable the dial-up connection, if enabled.

Windows® 7

1. Click **Start** > **Internet Explorer** to launch the browser.
2. Click **Tools** > **Internet options** > **Connections** tab.
3. Tick **Never dial a connection**.
4. Click **OK** when done.

**NOTE:** Refer to your browser's help feature for details on disabling the dial-up connection.
Appendices

Notices

**ASUS Recycling/Takeback Services**

ASUS recycling and takeback programs come from our commitment to the highest standards for protecting our environment. We believe in providing solutions for you to be able to responsibly recycle our products, batteries, other components, as well as the packaging materials. Please go to [http://csr.asus.com/english/Takeback.htm](http://csr.asus.com/english/Takeback.htm) for the detailed recycling information in different regions.

**REACH**

Complying with the REACH (Registration, Evaluation, Authorisation, and Restriction of Chemicals) regulatory framework, we published the chemical substances in our products at ASUS REACH website at [http://csr.asus.com/english/index.aspx](http://csr.asus.com/english/index.aspx)

**Federal Communications Commission Statement**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.
This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

**FCC Radiation Exposure Statement**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 31cm between the radiator & your body.

**IMPORTANT!** This device is restricted for indoor use.

**WARNING!**

• Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.
• Users must not modify this device. Modifications by anyone other than the party responsible for compliance with the rules of the Federal Communications Commission (FCC) may void the authority granted under FCC regulations to operate this device.
• For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.
**Prohibition of Co-location**

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures.

**Safety Information**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 31cm between the radiator and your body.

**Declaration of Conformity for R&TTE directive 1999/5/EC**

Essential requirements – Article 3  
Protection requirements for health and safety – Article 3.1a  
Testing for electric safety according to EN 60950-1 has been conducted. These are considered relevant and sufficient.  
Protection requirements for electromagnetic compatibility – Article 3.1b  
Testing for electromagnetic compatibility according to EN 301 489-1 and EN 301 489-17 has been conducted. These are considered relevant and sufficient.  
Effective use of the radio spectrum – Article 3.2  
Testing for radio test suites according to EN 300 328 & EN 301 893 have been conducted. These are considered relevant and sufficient.

Operate the device in 5150-5250 MHz frequency band for indoor use only.

**CE Mark Warning**

This is a Class B product, in a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.
This equipment may be operated in AT, BE, CY, CZ, DK, EE, FI, FR, DE, GR, HU, IE, IT, LU, MT, NL, PL, PT, SK, SL, ES, SE, GB, IS, LI, NO, CH, BG, RO, RT.

**Canada, Industry Canada (IC) Notices**

This device complies with Industry Canada license-exempt RSS standard(s).

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

**Radio Frequency (RF) Exposure Information**

This equipment complies with IC RSS-102 radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 31cm between the radiator & your body.

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 31cm de distance entre la source de rayonnement et votre corps.

**Canada, avis d’Industry Canada (IC)**

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l’appareil ne doit pas produire de brouillage, et (2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.
WARNING!

- This radio transmitter (3568A-RTGZ00) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

- Le présent émetteur radio (3568A-RTGZ00) a été approuvé par Industrie Canada pour fonctionner avec les types d’antenne énumérés ci-dessous et ayant un gain admissible maximal et l’impédance requise pour chaque type d’antenne. Les types d’antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l’exploitation de l’émetteur.

- For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.

- Pour les produits disponibles aux États-Unis / Canada du marché, seul le canal 1 à 11 peuvent être exploités. Sélection d'autres canaux n'est pas possible.

- This device and it's antennas(s) must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with IC multi-transmitter product procedures.

- Cet appareil et son antenne (s) ne doit pas être co-localisés ou fonctionnement en association avec une autre antenne ou transmetteur.

- The device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-channel mobile satellite systems.

- Les dispositifs fonctionnant dans la bande 5150-5250 MHz sont réservés uniquement pour une utilisation à l’intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux.
NCC 警語

經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或变更原設計之特性及功能。低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

GNU General Public License

Licensing information

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation’s software and to any other program whose
authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author’s protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors’ reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear
that any patent must be licensed for everyone’s free use or not licensed at all.
The precise terms and conditions for copying, distribution and modification follow.

Terms & conditions for copying, distribution, & modification

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The “Program”, below, refers to any such program or work, and a “work based on the Program” means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term “modification”.) Each licensee is addressed as “you”.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program’s source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of
these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.
3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

   a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

   b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

   c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

   The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

   If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any
attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section
is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and “any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free
programs whose distribution conditions are different, write to the author to ask for permission.

For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

**NO WARRANTY**

11 BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12 IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS
For Turkey only
